Description

Hi there,

I would like to know if it is possible to force the tikiwiki login process.

I want the login page for the home page, in order to force the users to log in. I have to modify the tiki-index page ?Do you guys have any hint for doing that?

Any help will be much appreciated.

Luca

Solution

The easiest solution is to remove the tiki_p_view permission from the anonymous group.

Whenever they open up the webpage, it will redirect them to the login page as they don't have permission to open up the site.

This will also prevent them to use direct links to work around the login process.

You could also use the module plugin to display the login module on the homepage.

If you need more information or if you don't think that this is a proper solution, please come over to the IRC channel: #tikiwiki on Freenode and ask away!

Greetings

Beestje
