Description
Hotword processing needs to be turned off for the text expansion of the built-in macro toc:

{toc}

If a page name in a structure has spaces, and a defined hotword appears as a name in the page, then the toc expansion is corrupted by the hotword processing. For example, if the page name in a structure is xxx yyy zzz ddd and zzz is a defined hotword, then the resulting link out of the toc expansion is the equivalent of:

((xxx yyy zzz ddd|xxx yyy)) ((zzz)) ddd

Note how the trailing portion of the page name is not linked at all now.

This may apply to expanding the built-in macro maketoc, especially when aliases are shown, as well.

Verified on the opensourcecms.org installation as requested.

Solution
Escape the results of the toc built-in macro expansion to prevent hotword processing as it is, by definition, already processed for links.

This is very similar to issue Hotwords and WikiWords are parsed to links in Table of Contents (maketoc) entries, breaking HTML. The patch attached to #638 must solve this issue too.
