Description

Three issues with recurrence rules in 3.0 (tested in 3.0beta1, at the <http://tikiwiki.org/TikiLiveCD> 0.5a)

1. When you hit preview event (before adding the new event to the calendar), the recurrence rule data is lost.
2. — A recurrence rule conflicts with something else. I get "**Events cannot end before they start**", but the settings are not to produce this warning/error message. The event cannot be posted to the calendar. See image attached to this bug report.--
3. If admin has not set the default calendar to be viewed by default (I didn't even know about that new setting in 3.0), events are not shown in the calendar for each user until that single user clicks on "Visible Calendars", and select the calendar (even if only one!), in order to view the events he/she has just added. Another user has to do the same process.

updated May 4th 2009: the second bug report from the list of three can't be reproduced anymore, at least with tiki3rc1.

The third, seems fixed in a quick trial I've just made (I read days ago that nyloth fixed that).

The first one about the preview is still applicable.

Solution

Fixed in 3.0
