Description

Lifting the priority of this previous request to 8, If the built-in database could be switch to a more robust DBMS such as MySql to go beyond the 3k-5k limit.

Else, to make File Gallery customisable as it has virtually no limit (i could not read any limit in the docu)as Tracker - which has limit. So that more information or item could be added to the File Gallery.

Solution

I a not a programmer so could only provide rough ideas.
Such as using a robust DBMS instead of the built-in database in the Tracker which has limits as described above.

A possible option to go past the limit is to make the File Gallery customisable to be more or less as powerful as Tracker in terms of capability to add more fields of information.

Presentation wise, a module or menu which could be added to the File Gallery (as standard) labelled as say.... "Document Management" or a separate menu because once the limit is broken it is a special feature. Better than Tracker. Just my thoughts.

I said last wish request that i may put in seed money (not much) to get this off the ground.
