Description

We use your engine for knowledge base items as well as intranet and were wondering if there could be a way, if it doesn't exist and we just haven't seen it, to be able to view words users search on that are not in a wiki, not found etc so we could take that data and make sure to add those words to a tiki page.

We wanted the ability to run reports on what words folks are searching on and not just ones that got hits

Thanks in advance

Mark
