### Description

Inter-user messages from within tiki in tiki 2.3:

if you write to many users at once, you use to write their usernames separated by commas, but now, tiki seems to work only if you separate them with semicolon (;)

If you use commas to separate address in the to or cc fields, you see the wrong message: you have to allow receiving messages from others (or similar). And "no user with that name".

BTW, I had that setting enabled for me, as default on the site, and for all my users.

### Solution

fixed in 9.x+ at least

### Importance

7

### Priority

35

### Demonstrate Bug (Tiki 19+)
