Description
After editing and saving a certain section of a wiki page, it would be very helpful, if TikiWiki would scroll down to this section again, when reloading the page.

Many other Wikis like Mediawiki or Dokuwiki handle section editing this way and it is indeed very convenient.

Imagine you edit a section of a very long wiki page and you have always to scroll down manually, when you have saved the page but have to review it.

Solution
Already done in 3.0
