Related-to

- ✖ horizontal rule "- - -" does not work with more than three hyphens ("- - -")

Description

When using three hyphens (---) you get a horizontal rule in v3.0 Beta 3, but if you use more than three hyphens (i.e. ---- ----- or -----), you will not get a horizontal rule on the page. Greater than three hyphens was valid in version 2.x of TikiWiki to create a horizontal rule.

Solution

Expand parser to include greater than three hyphens, or develop way to change all existing horizontal rules to the new standard of three hyphens for administrators who are upgrading.

Comments

Philippe Cloutier 08 Jan 19 15:56 GMT-0000

I cannot reproduce this in either Tiki 11 or 15. The code appears to be fine for all Tiki versions, so I do not understand how this could have happened.

If you can reproduce with a current version, please provide the full source of a problematic page.
