Description

Goal

We want doc.tw.o to generate nice printed docummentation.

Problem

It's too difficult to detect which pages are not in a structure.

A new page may be created but not assigned to a structure and be lost, and not appear in the printer version.

It's ok that some pages are not in structures (notes, redirects, etc) though.

tiki-edit_structure.php -> list at the bottom should only show me pages that are not in current structure, otherwise, I can add the pages at two places in the structure.(feature or bug?) This could useful to move pages though because current system is too cumbersome for large structures like the one on doc.tikiwiki.org

Perhaps, the structure if should appear in list pages. So by sorting, we could find all orphan pages...
