Description
    Dear All

    There is a problem with wiki staging and approval on Tiki 3.0 namely that practically it can not be switched off once it was turned on.

    Description:

    The issue is that if I switch the feature off than edit an approved page than upon save all content of a wiki page gets duplicated. If I save again, it duplicates again and there is no escape. ("Preview" shows ok but "minor edit" makes the mistake too).

    The same thing happens if staging and approval is switched on with the following setting:

    Force bounce of editing of approved pages to staging is NOT marked (preference wikiapproval block editapproved disabled)

    Workaround: if a page gets messed up as described above, switch on staging and approval again, enable *preference wikiapproval block editapproved*, make an edit of the page, deleted the duplicated content, approve and the official page will be fine again

    Some more notes: I was working as admin, the site was on TW2.4 before, it was upgraded with the official 3.0 release only, Staging and approval was switch on the first time, it was not used with 2.4 version

    Please resolve this if possible,
    Many thanks,
    Gezza

Update:

actually it happens now also when we edit a staging page twice. If I edit once, than approve, all is fine. If I edit twice the staging copy content starts to get duplicated 😕

Solution
    can't reproduce in Tiki 6.
