Description

using long Chinese characters as browser title will cause the browser title broken, for example, if you use 'æœøç"µå·¥ç",^' as browser title, the browser will show 'æœøç"µå·¥ç",^'.

it's maybe an adodb problem.

Solution

A temp solution is forcing the adodb drivers to use utf8 encoding in the database operating. for example, if you use mysql driver, you can modify function \_connect and function \_pconnect, add:

```
@mysql_query("SET NAMES 'utf8'", $this->_connectionID);
```

before:

```
if ($argDatabasename) return $this->SelectDB($argDatabasename);
```

in the above two functions.

good luck!

## Comments

**Arild Berg** 08 Oct 11 04:05 GMT-0000

This is an old case, but Tiki 8 has several improvements when it comes to the non-english character handling. So, this case may be solved.
