Description

When creating a tracker (see the attached MS Word document "Tracker - Attachment Field Type Bug.doc"), choosing the "attachment" field type results in the form displaying the directions/description for the "text area" field type. This mismatch occurs upon first creating the "attachment" field. Once this field is saved, the user can re-open it for editing, and then the correct description (describes parameters, etc.) for the "attachment" field type is finally displayed.

Solution

Work-around - Just ignore the description that belongs to the "text area" field type, and save the attachment field with no parameters specified,... then re-open in edit mode to view the correct description for the attachment parameter list.
