Description
When user has spaces in their name they can`t use messaging system
try "test user" as username

Solution
This is not good but U need use test_user

sylvieg : that's fixed, right? - amette

I tried to register a user with whitespace - doesn't work - closed.

It is possible to have usernames with spaces

As per Tiki23 it is still not possible to have a username with a space.
I hesitated to close this as my understanding is that it will never be and option are
username without space or email address in Tiki.

However this is not the first I see this issue discussed or questions asked about it.
They are many case where you would like to use the family name (Jean Luc de la
Branche) of someone or the complete name (Bernard Sfez) as username. For example,
customers of a shop or registering members to a service that don't really know there are
now "Tiki users" (transparent registration). Could be also related toSocial Network login
(Facebook)

You can change the pref to allow any characters you want, but things
will break, so don't 🤎

We can't claim that we don't support spaces in usernames unless we deprecate all our
alternate login methods such as openLdap and AD.
LDAP logins can have spaces and they typically have spaces because they usually are
people's names.
