Description
    Congratulations on the work put in on the calendar. I love the recurring event feature!

    Of course there is always more: I would like to be able to post an event that recurs, for example, the second Saturday of each month.

    Currently, I can only post an event that recurs by date. Many of the events that I post occur on the first Wednesday of the month, or the second Thursday. They recur, but not by date; rather, they recur by designated weekday.

    Thanks for any help you can provide on this.

    P.S. Also, some events occur the same time each weekday (but not Saturday or Sunday). Providing for weekday recurrance would be a nice addition as well, but less important than the above.

Solution
    In the Calendar feature, when the Recurrence box is checked and the Month radio button is clicked, have a secondary set of radio buttons, one of which allows a recurrence to happen by date and the other of which, which clicked, displays a recurrence by designated weekday. This second radio button would display a dropdown box that lists "First" through "Fifth" and another dropdown box that lists "Sunday" through "Saturday". One element from each dropdown box would need to be selected to be valid. An "Apply" button would confirm the choice.

    The above would be the minimum coding for displaying designated days.

    It could get more complicated if the coder feels like allowing multiple choices under the "First" through "Fifth" dropdown box (e.g. "Second" and "Fourth" Tuesdays)

Thanks for taking the time to read this.

I agree that this kind of enhancement would be very useful. But I would like to see a more flexible way to define recurring events. I think about statements like:

- first monday of every year{br}*(which is the same as: first monday every january)*
- second friday every third month{br}or even: second friday every [even|uneven] month
- saturdays on every third week
- the 15 of every forth month

and with a creative using of redefined *weekly*, redfined *monthly* and *startPeriod* fields the structure of *tiki_calendar_recurrence* looks - for my "none php/MySQL programmer" eyes - to be qualified for this purpose.
Needs just a lot of work on the program logic...

All of my recurring events are 2nd Sunday and 3rd Sunday. (until they change to 2nd Saturday and 3rd Saturday 😃 - but they'd still be recurrent based on day placement in the month rather than date)

hrsms 29 Jan 13 14:35 GMT-0000

My recurring events are all in this category also. In my case, every second Saturday. As in the original post, I can also see the need for multiple selections, e.g. every second and fourth Tuesday.
