★★★★★ (0) ?

Description

It should be easier for new users to migrate to tikiwiki: an import blog function (e.g. from wordpress) would help.

Workaround

Ok, lets *release early!*

tikiwiki 3.0

exported file from wordpress 2.7.1

- doesn't consider page creators
- doesn't import comments
- no wiki 2 html
- no file validation
- doesn't import history

tiki-import_wpdump.php

```
<?php error_reporting( E_ALL ); require_once( 'tiki-setup.php' ); require_once( 'import/import_wordpress_dump.php' ); header( 'Content-Type: text/plain' ); if( $tiki_p_admin != 'y' ) die( 'Admin access required' ); if( $_SERVER['REQUEST_METHOD'] == 'POST' ) { $dom = new DOMDocument; $dom->load( $_FILES['importfile']['tmp_name'] ); echo "Processing...\n"; flush(); $importer = new ImportWordPressDump; $importer->import( $dom ); exit; } header( 'Content-Type: text/html' ); ?> <html> <head> <title>Import Wordpress-Style Tiki Dump</title> </head> <body> <form method="post" enctype="multipart/form-data" action=""> <input type="file" name="importfile"/> <input type="submit" value="Import"/> </form> </body> </html>
```

/import/import_wordpress_dump.php

```
<?php //this script may only be included - so its better to die if called directly. if (
basename($_SERVER['SCRIPT_NAME']) == basename(__FILE__) ) { header("location:
index.php"); exit; } class ImportWordPressDump { function import( DOMDocument $dom ) {
$pages = $dom->getElementsByTagName('item'); foreach( $pages as $page ) { $data =
$this->extractInfo( $page ); $this->importPage( $data ); } } function extractInfo( DOMElement
$element ) { $data = array(); $data['revisions'] = array(); foreach( $element->childNodes as
$node ) if( $node instanceof DOMElement ) { $data[$node->tagName] = (string)
$node->textContent; } return $data; } function importPage($data) { global $tikilib; if(
$tikilib->page_exists( $data['title'] ) ) { print "Page already exists, no action taken:
{$data['title']}\\n"; return; } $tikilib->create_page($data['title'], 0, $data['content:encoded'],
strtotime($data['wp:post_date'])); $this->oldidnames['wp:post_id'] = $data['title']; } } ?>
```
