Description

Hi,

I try to install Tikiwiki 3.1 on a PostgreSQL 8.3.5 database.

I create a local.php file and installer will find and connect the database.

After clicking on "continue" during the "Install profile" screen, the installer fails, printing the following message

Fatal error: Call to a member function fetchRow() on a non-object in
/wiki/dev/3.1/appli/tikidev/installer/installlib.php on line 247

Looking at the shema database, there is only 5 tables

tiki_dynamic_variables

tiki_minichat

tiki_pages_changes

tiki_plugin_security

tiki_send_newletters_files

and 2 sequences

tiki_minichat_id_seq

tiki_sent_newletters_id_seq

Is there a fix ?

Regards,
Franck.

Solution

This should be fixed on trunk.
