Description

Two aspects:

A- Alternate theme for certain browsers:

Ex.: simple theme for IE6 or pocket browsers.

B- Showfor plugin, as developed for Support.mozilla.com

Should the plugin be called SHOWFOR? (if so, it's should be quite generic).

- printer
- various browsers
- mobile versions
- users, groups, perms, upon feature check
- etc

Even if the generic plugin is not called browser, SUMO can continue to use SHOWFOR (And avoid needing to edit all the content) thanks to plugin Alias

See: Alternate content by media
