em dash wiki syntax not functioning correctly

In 3.x, the emdash wiki syntax is not working.

In the documentation and previous releases, the following should be represented as an em dash — but it is not. It is being interpreted as strike out text.

The issue seems to appear when there is more than one em dash in a document — and seems to be linked to the last tilde.

This was posted on the discussion forums and a suggestion was made that there needed to be a space between the tildes and the dashes ~ — ~ like so but it does not seem to work.

Please demonstrate your bug on show2.tikiwiki.org
