Description

Goal: Making is easy to use description field without needing to duplicate data entry

Say I use Tiki for terminology.

If I use the wiki page name for terms, I will end up with many weird characters in the URL.

If I use the description for the term, I still need to enter a cleaner/shorter wiki page name.

This is an unnecessary step.

Create wiki page could be full term, and accents and special characters are suggested (but overrideable)
