### Description

placing BRANCH-1-9:  
into an assigned module causes WSOD.

this was a big problem for me on upgrade, because I had rcontent in my 2.x installation, upgrade to 3.1 gave me WSOD. Lack of access (because of WSOD) made fixing the problem much more difficult for me, as an end-user.

According to luciash in chat:

seems conflict between plugin and wiki syntax to me, because recently the syntax was made more universal and plugins can be called using lowercase {pluginname} syntax too

note, sorry if this posts twice...

### Solution

Workaround:

Deleting lib/wikiplugins/wikiplugin\_rcontent.php fixes WSOD, rcontent syntax then pulls content correctly (tho apparently not correctly parsing text formatting unless using {wiki}BRANCH-1-9:

{/wiki})
