Description

I have a problem similar to this one: "Edit" button in Wiki points to "/\tiki-editpage.php?page=HomePage".

Other buttons also have invalid URLs, links have correct URLs.

Configuration: TikiWiki 3.2, Windows XP, Apache2.2, TikiWiki is in the server root directory.

Solution

It seems, the bug is in block.self_link.php and function.query.php in lib\smarty_tiki.

The following code likely fixes it:

block.self_link.php, line 56

```
$self_dir = dirname($_SERVER['PHP_SELF']); $params['_script'] = ( $self_dir == '\\' || $self_dir == '/' ? '' : $self_dir ).'/'.$params['_script'];
```

function.query.php, line 138

```
$self_dir = dirname($_SERVER['PHP_SELF']); $php_self = ( $self_dir == '\\' || $self_dir == '/' ? '' : $self_dir ).'/'.$php_self;
```

Thanks VladV !

This was really annoying me & as a beginner on tiki & php I had little hope of working it out myself...

So far all broken buttons are now correct.

BTW I am using 4.2 and only needed to make the change to `block.self_link.php` to resolve my problem.
In 4.2 the listed code does not seem to appear in `function.query.php`
