Description

I have a tiki site that's running trunk 4.0. It has User Watches enabled, and the wiki feature also.

When I go to My Watches, I don't see anything that would allow me to globally set watches on all pages of the wiki.

Yet, if I enable User Watches Translations and go to My Watches, then I see a picklist with a single element for watching creatino of any translation on the site.

Seems like a bug. I remember that I used to be able to globally set watches on all wiki pages (not just translations), and I think it was in the My Watches window.

Solution

This seems to be working in Tiki 6. I see the watch event "A wiki page is created, deleted or edited, except for minor changes." even without feature_user_watches_translations. Feel free to reopen if you can reproduce in 6.1.
