Description

Everytime I use the maketoc inside a wiki page on a fresh tikiwiki 3.2 install the whole page content is duplicated every time I hit "save". Even if I delete all the content but one version and hit save the whole PREVIOUS page is duplicated again. Like I hit save: two times the page content. I delete all but one time the content, I hit save: three times the page content. I delete all but one time ... save ... four times the page content.

Only removing the maketoc makes it possible to get rid of the problem. But meanwhile the wiki content has become a bit more (30-40 pages) and the same problem happens more and more often without having any maketoc included when the page is becoming bigger.

That was done with Opera browser on a page with 4 h1 headings but I doubt it is a browser problem. 😊

Solution

Works with Tiki 4.
