Description

tiki-list_comments.php does not parse comments in column "Comment", regardless of whether section_comments_parse ("Parse wiki syntax in comments in all sections apart from Forums") and feature_forum_parse (Accept Wiki syntax) are enabled.

This is a regression from r20794 / r22511.

Workaround

I had a go at this, thinking it was an easy one and needless to say, it's no so... 😊

The parsed version of the comment is currently (in 12.x) available in a tooltip which shows if you hover over the "Comment" column. I tried swapping these round but truncating the parsed comment data doesn't work, so you get quite tall rows which messes up the layout of that list. I tried adding some css to add scrollbars but it looks like a mess, so have given in.

I didn't even work out how to deal with the two different prefs relevant depending on the object type... i have attached a patch to this wish in case anyone else can think of a clean fix.
