Description
Uploading a Mediawiki-XML-Dump created by Mediwikis dumpBackup.php leads to an empty page and an apache segfault on debian etch 64bit.

From /var/log/messages

```
apache2[3658]: segfault at 7fff3f74cef8 ip 7f3837b9d2f7 sp 7fff3f74ce00 error 6 in libpcre.so.3.12.0[7f3837b8e000+25000]
```

File is beeing uploaded correctly in /tmp, upload to File Galleries works correctly.
changed the following values in

```
/etc/php5/apache2/php.ini post_max_size=128M upload_max_filesize = 128M max_execution_time = 600 max_input_time = 600 memory_limit = 32M (also tried 64M,128M,256M)
```

```
/etc/apache2/apache2.conf Timeout 600
```

Running Debian Etch amd64 all packages actual version of the distri.

Ways to reproduce:

1.) create a XML-Dump from Mediawiki via

```
php dumpBackup.php --full --contents > dump.xml
```

2.) use tikiwiki-importer via ->admin->tikiwiki-importer
3.) Upload in 1. created xml-dump

Neither changing export settings of dumpBackup.php --full or --current with or without --content nor changing import options in tikiwiki-importer changes outcome.

Addition:
-Upgraded to tikiwiki4, upgraded to debian stable (lenny) as suggested
Problem still exists:

```
apache2[2231]: segfault at 7fff2184eec0 ip 7f9019c1bf6b sp 7fff2184edc0 error 6 in libpcre.so.3.12.1[7f9019c0b000+28000]
```

Solution

PHP applications shouldn't cause apache2 segfaults. This looks like a libpcre or apache2 bug. I suggest you upgrade to Debian stable.

> Does not help!
