Description

Steps to reproduce:

1. as an admin on a wiki page follow the Perms link
2. go to "Select Groups" and tick "Anonymous" only and [Select]
3. on "Assign Permissions" tick for example the first one: "Can use the page as a tracker template (*tiki_p_use_as_template*)" and [Assign]

it will save, reload the page but the previously ticked checkbox doesn't display as ticked anymore

Workaround

It works only when Registered group is selected together with Anonymous too.
