Description

We can't use rating yet (hopefully soon), so at the moment it is just the priority user chooses. From 1-low to 9-high is very subjective and people tend to rate things higher, than they 'objectively' are. I just stumbled across this classification from Bram Molenaar and think that it is a good guideline for rating Items. As long as we use the Priority field, it would be easy to implement, later for Ratings we would have to add something like a legend or so..

~~- copied from VIM reference manual TODO List~~ -
Priority classification:
9 next point release
8 next release
7 as soon as possible
6 soon
5 should be included
4 nice to have
3 consider including
2 maybe not
1 probably not
- unclassified
~~- end of copy~~ -

Solution

For the moment, just write it behind the numbers in the priority field. When rating is implemented, we have to think again about this.

This one was pending open for too long - CLOSED!
Conceptual redesign of dev.tw.o needed anyways!!

Importance
    8

Priority
    40

I noticed, that although I try to be disciplined with that, I don't really have consistency in my ratings. I just saw two tracker items I submitted and the less important one is rated higher... *sigh*
