Description
If a user Alain sets a watch on a page, and there is already a group watch on that page for a group to which he belongs, then Alain gets two notifications whenever the page is changed.

This was found on terminology.tikiwiki.org which runs 4.x

This is an instance of a more general problem. Watches do not make any effort to send a single notification, if the user has a user watch and a group watch matching, several user watches or several group watches.
