Description

It would be nice to add autocomplete for "Find" text boxes for the seach module, header search and advanced seach features.

many x.tw.o sites would benefit from that, for instance...

(I add this request here after Jonnyb explicitly asked me to suggest him places where atuocomplete would be adequate 😊)

Part of this issue is there are four search modules that need refactoring into one. The page search one (well, one of them) already has a/c on, so that "just" needs merging with the other ones... 😊
Nothing in Tiki is simple!
