Description
- Update to below, see attached screenshot. Just discovered a pop-up application for pasting text. Very weird to see after decades of pasting text the old fashioned way ;-)  

WYSIWYG Editor Tiki 5 RC-1

fresh from svn

Cannot paste text into editor

- anything pasted just disappears
- tried wiki and blog post
- tried 5 Alive and The News themes
- tried Mac Safari and Chrome

Cannot paste text
TW 4.1: Edit a wiki page with WYSIWYG editor:

1. Can type & use formatting tools.
2. Cannot paste text. When Text is pasted, the desired text appears very briefly, sort of flashes on the screen, then disappears. Saving at this point saves any typed or formatting changes, but the pasted text does not appear.
3. Can switch to Wiki Editor, paste text, switch back to WYSIWYG and format it from there.

I am assuming the new WYSIWG editor removed this, but am just checking.

Kent Barrett 18 Jan 11 11:24 GMT-0000
Yes. I believe the editor has been replaced. It works pretty good. You can not only paste text, but coloured and sized text.
