Description
After updating tikiwiki3.3 to 4.1, the following fails to load:
/tiki-admin_categories.php
/tiki-admin_polls.php
/tiki-wiki_rss.php?ver=2

I checked memory and execution time therefore the problem due to this is ruled out. Problem must be somewhere which I could not figure out.

Time does not show correctly while date is perfect. It needs me to set time of publication of articles manually.

The module since your last visit does not work properly.

On my part I reinstalled it several times but errors persists.
