Description

How are the various *.tiki.org sites different in their configuration?

How about compared to the default setting?

How could we have a diff of 2 site's config? Perhaps this could be exported as a profile, and thus an easy way to "copy"/migrate configs from one site to another.

Ex.: in a staging & prod setup...

If both sites have shell and use System Configuration, maybe use something like <http://www.fossil-scm.org/> to compare/merge...
