Description

Email a periodic digest (report) of a tracker activity (new open, and changed to pending or closed).

For sites with low activity but high interest in the users on a specific tracker activity, such as Barter networks (<http://intercanvis.net> and similar) such feature is needed for users, who register, but then, after a few months, they don't visit the tiki site any more to see notifications of changes (and they didn't know how to browse the categ. tree to select which categories to watch.

However, other (closed source) bartner software sends a monthly digest to registered users with new items added to each tracker. And this would be very welcome by users (usability)

Solution

ML: there is Daily reports, which could be extended.
