Description
One of our users reported that she was receiving watch notifications whenever she clicked the "Discuss" button for a wiki page, even though she was not posting anything in the forum topic.

The cause was a Watch on "A user posts a forum topic (forum_post_topic)" for the Wiki Page Discussion forum. (Our Tiki uses a forum for page discussion instead of page comments.)

The preferred behavior is that this type of watch would only generate a notification the <u>first</u> time the Discuss button is clicked for a page, when the new topic is actually created, rather than just accessed on successive clicks.
