Description
Semantic link "alias" broken on 4.1 for me (regression)
See:

it shows an error page, suggesting similar page, search box, and the option to create the page (as reg. user)

However, the page name "Pendents" is defined as an alias of "pendent", as it can be seen here:

which has underneath (inside the "[+] Fet" box):

(alias(pendents)) | (alias(Pendents))

So this looks broken to me (at least, with common settings as I have).

Reproduced in doc.t.o with http://doc.tiki.org/PluginRR (which has an alias link from
http://doc.tiki.org/PluginR )
Discussed (with more details) on irc:
UPDATED: Fixed in current branches, at least (9.x, 11.x, 12.x)

Comments

Marc Laporte 07 Feb 10 00:18 GMT-0000

pendents & Pendents are the same...

Xavier de Pedro 08 Feb 10 11:22 GMT-0000

in case the "case" was important
tiki, anyway, should be able to work with such redundancy

yohomerr 09 Feb 10 03:29 GMT-0000

The documentation at http://doc.tikiwiki.org/Alias
uses different syntax, noting the prepended '*' character, which works for me in 4.1.
I did not try without the prepended '★'.
