Description
 Update!

 1. Unzip Zip Files (Batch Upload) is Broken for Windows and CentOS
 2. Adding Multiple files one at a time, then uploading in-batch is broken ONLY for Windows XP (CentOS works).

 System Used:

 1) Windows XP
 XAMPP
 Tiki 4.0 and 4.1 (12-15-2009)
 IE 8 or Mozilla FF 3

 2) CentOS 5.x
 Tiki 4.0 and 4.1
 IE 8

 In Tiki 3.x it is possible to upload multiple files at one time to any file gallery by one of two methods:

 1. Keep clicking the "Add" button and add select multiple files for uploading. Then finally click the "Upload" button.

 2. Select a zip file to upload, and check the "Unzip" checkbox.

 In Tiki 4.0/4.1 this feature is broken. The resulting behavior is that the upload progress-indicator (spoked-wheel animation) runs forever, and the Apache server must be restarted before the user can

continue to upload any other files after the failed attempt at multiple-uploads.

For purposes of data/file migration to Tiki, this is a serious issue.
I'm not much of a PHP programmer, and I suspect other Tiki users are not either...so checking out the latest code from the head of a branch is probably not a great work-around (in general).

Workaround
The bug seems to be connected with the new file quota code in "filegallib.php". I succeeded in bypassing that new feature, and restoring the unzipping a zip file (batch upload) feature. See the attached PDF and zip file (containing the hacked version of filegallib.php that restores the batch-upload by zip feature).

danielapsilva 11 Mar 10 20:14 GMT-0000

IÂ´m using Windows 2008, IIS7, files stored in database and the file attached still doesnÂ´t make the batch upload work.

Ed 17 Mar 10 14:14 GMT-0000

danielapsilva - You are correct. The upload-zip feature was restored in the new 4.2 release. I don't know if they back-ported the fix/patch to 4.1. There are still issues regarding the file galleries - due to the enhanced features in the 4.x releases. The Tiki Activity/Action log feature seems to be broken when it comes to reporting on activities in the file galleries. The user ends up with a blank screen instead of a report. I have yet to report this bug. These issues are frustrating for Tiki-enthusiasts (at least for me, as I'm not a PHP programmer and hate to see working features broken in new releases). -Ed
