Rating

★★★★★ (0) ?

Description

When debugger is activated, the admin panel is no more working. I have mainly 2 effects :

- when I am on tiki-admin.php (the main page), I cannot go to any of the admin panel (features, freetags, look, etc...)
- When I go directly to an admin page by giving the url by my own (eg. tiki-admin?page=look), the tabs are not working.

Once debugger console is deactivated, everything works well.

Solution

Commit 26941 in 5.0 should fix the problem
