Description

feature alias (semantic links) is not SEF (search engine friendly) ready

Using 4.2.

See it here:

page:

<http://gavarrespedia.org/pendent>

has a few aliases such as:

(alias(pendents))

If you have SEF feature off (btw, and htaccess rewrite rules on), when you type:
<http://gavarrespedia.org/pendents>

you get

<http://gavarrespedia.org/pendent>

However, if you enable SEF feature (to make tiki create also short urls), then:
<http://gavarrespedia.org/pendents>

shows error, page not found, maybe you were looking for pendent, etc.

and it should just show the page "pendent" straight away

Solution

Works in 9.x+

I've done something which disabled my semantic aliases.
One of the things I've done since they worked has been to enable SEF feature.
Disabling SEF feture does not restore the alias operation.
Still puzzling.

did you try clearing your tiki cache?

yohomerr 10 Mar 10 19:18 GMT-0000

yes, xavi, thanks; also browser cache; and sorry about cluttering up the comments section with duplicates. Since I had too many other things going wrong at the time, and want SEF, I just patched my critical links which were using semantic alias until I look at it again.
