Description

Sometimes we have forum topics with a large number of comments. Let's say the default settings allow to display only the first 20 comments on the first page and provides a "next page" link to the following 20 comments.

But this link doesn't work correctly, there aren't any comments displayed on page 2 (only the initial posting).

I tried this behaviour on the tikiwiki demo page, too ... it's the same bug in the demo.

How can I correct this?
