Description
    We would like to unify the search and find boxes on our site into a single module with a text box and Ajax auto-suggest for Wiki page names. If something that had no auto-suggestions were typed, it would do a full text search.

    This is similar to MediaWiki. The current interface confuses even software developers.

    We would be open to hiring a consultant and contributing the resulting module back to the TikiWiki project.

Solution
    Commit 26311 + 26308 (tw6)
