Description

Hello,

I can act that, with new version of the dev dev.interface:

- No efficient access to "list yours" (empty list with query error)
- No filter which don't reach "query error"

No more tool efficient to manage the report "bugs ans wish"

I stop till I don't receive a message telling that we can access to :
- filters on messages

- find my own message

Waiting,

Because I can't work without these tools

I have waited two days.

What happens ?

Solution
I (re)submit by chat yesterday.
The problem has been identified on 04/13/2010 at 2.00h Paris
Solved by tikiwiki development team
It was a true bug into SQL request generation.

Comment by trebly :
The "IN ()" syntax used in the queries generated previously was not accepted by Mysql.
