Description

Hello,

Some of my last items created don't appears into the "list yours" request on dev.tikiwiki.

Details

It seems that it is for all items since a particular date. I have information about this.

Some day ago we had on chat an exchange about the generation of a query with an error (item 3104), when submitting "search" (the error had been checked during the chat - use `od in()` statement in the SQL request not accepted by MYSQL). The next morning it was put out.

But while we were checking the "list yours" had disappeared. The next morning it was there.

Others linked subjects

Items : 3114, 3116

Beginning to find the problem (while redacting)

I just made controls, I discover that this items that I have submitted have no author name, I was nevertheless logged in.

This explains the fact that the item don't appears in the list but not why the author had not been defined.
