Description
Similar to PluginAnnotation for images.

This would make it easier for people to know who added what comment, when and to distinguish the main content, from notes.

Similar to PluginMouseOver, but should be easier to use.

Related:
Signature and/or datestamp and/or approval-vote and/or comment plugin/syntax

This would be great, and probably quite necessary for my project. Actually, I came back to tw with the expectation that this feature had been added, based on the doc, so I'm not impressed to eventually realize that it's vapour-ware.
