Description
   On some PHP-Versions (e.g. PHP Version 5.2.0-8+etch16 - not on PHP Version 5.3.1) the file gallery
   tree view only shows the 1st level of galleries.

   See the incorrect

   and the correct behavior

   the parent selection box at the edit form of galleries only shows these 1st level galleries too.

   galleries of a deeper level are not shown. Thus you can not create file galleries with level 3 or
   deeper.

Solution
   this comes from an invalid "&" character at the parameter "allIds" in the parameter list of the
   function _getGalleryChildrenIdsList() in line 860 of file filegals/filegallib.php.

   for the first of the recursive calls of this function "allIds" have the correct list of Ids. for the second
   recursive call "allIds" has no values.
   this is only reproducible on specific PHP-Versions (see above). on other versions the behavior seems
   to be correct.

   the same error may be true for the function _getGalleryChildrenIdsTree() a view lines below.

   Sorry. I do not think this is a good fix:
   in tiki4, tiki5 with php5 everything works fine.

Perhaps it is a problem with your php
allIds are not changed in the functions so the problem is somewhere else

seems to work with 6.3

If the $allIds array is not changed in the function (as $subtree is) - why passing $allIds by reference?
there is no need to do it and it leeds to erroneous behavior at for the specified php version - may be this
is a PHP-version-recursion problem.
Is there any other recursive code? - I propose to test it on the mentioned version.
