Description

Critical Usability Problem With WYSIWYG Editor

Version 4.3

"Insert an Image" does properly put an image in the Web page but the editor does not preserve the "Vspace" and "Hspace" attributes in the source code. It is not possible to do spacing around an image in a Wiki page.

The editor properly shows the spacing around the image after inserting from file gallery and before preview. Looking at the source inside the editor before a preview or save shows only this example:

" "

While the editor properly shows the spacing (inside the editor), the source code is not set to save the spacing.

It is not possible to manually enter the "Vspace" and "Hspace" into the source and save or preview successfully; the "Vspace" and "Hspace" are deleted.

It looks like the source code is simply using the original Tiki text approach. This would be a deal-breaker for my users.
