### Description

Working about "http://dev.tikiwiki.org/tiki-view\_tracker\_item.php?itemId=3466", I did upload a huge categories csv.

I had a category giving itself as parent, by mistake:

category,description,parent

(many, many lines)

"811.353.1 Georgian language","...","811.353.1 Georgian language"

This gave an error message.

After this, my tiki is completely broken: all pages involving categories (categories, wiki, articles, files) are simply blank. (But I saw later — see comment — that the offending line is not in the database. The problem can be something else.)

Any idea about the problem and how to repair this?

## Comments

Dominique Meeùs 03 Jul 10 16:49 GMT-0000

The wrong category (parent of self) is *\*not\** in the database. The import of the csv of categories stopped at the last good category.

I wonder what is blocking my tiki then!
