### Description

Hello,

Relating to id2936 id2950 and another id lost (mine but when the author was not set always into track id data's.

It remains impossible to an admin to changed quite anything depending of admin (can create wiki, articles) but not to end any admin task.

The action as, change a user prefs etc, disconnect admin and send the ERROR Connect page access not allowed so the corresponding sites are dead sites.

An installation of 3.3 or upgrade to 3.6 must be done again from database backup.

The problem is that if users has been connected between the upgrade and the necessity for admin to make some changes (I have made...) I had to manually add articles and wiki pages from sql.

We must admit that upgrade from 3.x to 3.x is impossible in some cases unknown, not yet found

I test today if an upgrade 4.2->4.3 had an effect but none.

I have checked and tested all solutions proposed by sylvieg and marclaporte.

The datas are OK but the problem remains for me till december and for the moment 5.0 could not accept the datas 3.3->4.2->5.0. The sites are in a suffered lethargy and cut off publishing and referencing.

Xavier de Pedro 10 Jul 10 19:36 GMT-0000

Isn't there a warning (since this is a known issue under some cases) when you perform the upgrade from 3.x through tiki-install.php?

I'm confused...

eddiem.com 24 Jul 10 01:48 GMT-0000

I tried the 4.1 to 4.3 upgrade and no change.

Admin still can't do anything.

Bernard TREMBLAY 26 Jul 10 11:38 GMT-0000

hello,

I found a solution to upgrade (with a manually pre-treatment of data) and make available 3.x or 4.x with 5.0.

Note :As I have not described this solution on any tracker, neither verified if the last updated version provides the solution (discussed on chat two weeks ago, I can't give here the full answer;

The result of a very simply treatment is not completely tested but after a common use during more than ten hours I had not any default.
