Description

it may be bigbluebutton's fault, but i have experienced
the following strangeness when using the plugin:

the microphone can not be turned on in the flash interface ...
therefore no sound at all after setting up the 0.7 VM using salt.

description of process:

download, unzip 0.7 VM
create virtual machine using bbb disk image, start vm, wait for
package updates, login, new password

first bbb-conf --set-ip SOMEHOST works perfectly, i can log in the
Demo Meeting with multiple users, microphone and sharing works all
fine

then i add the salt via sudo bbb-conf --salt SALT and restart with
sudo bbb-conf --clean

i can still access http://somehost , but can not log in to any
meetings anymore due to salt , thats ok, cause its secure like this

now i add the salt to my tikiwiki 5.0 via admin->features

then i create a wikipage with the plugin:

i am able to connect to the conference, even with multiple users,

webcam sharing works, but the microphone can not be shared. clicking on the flash microphone icon does not give any sound, nor any confirmation dialog to allow access to the webcam/mic devices

now as I do not have too much experience regarding BBB, i would kindly ask for your help to get the microphone sharing working

Perhaps better to ask on BBB forums
