Description

We were trying to have the new antibot captcha working in a Tiki site based on Tiki trunk (during TikiFestBarcelona2 - mid July 2010), where a user tracker was set to collect more information from users at registration time.

when we enabled zend new antibot-captcha , no antibot code was shown at registration time, because there seems to be some conflict with the user tracker.
Once the user tracker was disabled, the antibot-captcha was shown properly, etc.

-

Update: disabled the new zend antibot captcha, in order to use the former simple captcha image, but that one is not working either, if user tracker is on.

Solution

Fixed with commit 29152.
