## Description

If I have a wiki page SomePage that has a link Page With Space in it, when I dump the wiki, the generated HTML in SomePage.html doesn't have a correct hyperlink in it to get to Page With Space.html.

The hyperlink contains plus signs instead of spaces (or %20) like Page+With+Space.html, but the target page on disk is called Page With Space.html. Clicking on the link in SomePage.html generates a file not found error.

## Solution

In lib/admin/adminlib.php, function dump(), adding the following line:
$pageName = str_replace(" ", "+", $pageName);
after the first line in the while loop:
$pageName = $res%22pageName%22 . '.html';
fixes the problem by changing the generated Page With Space.html to be called Page+With+Space.html.
